

PROJECT

Plan4CET

Improving Clean Energy Transition planning at local and regional level

The general objective of PLAN4CET is to support European regions and cities to design, develop, and implement CET plans according to their needs and possibilities. To do so, the different project outputs (methodologies, tools, capability building, and technical assistance) will be generated to support EU regions and cities in their CET planning, implementation, and monitoring activities.

01

Objectives

The Plan4CET project will work on the institutionalization and improvement of governance structures to facilitate regions in addressing and enhancing the implementation of clean energy transition policies. The project integrates a cross-sectoral and interdepartmental vision, fostering collaboration among various administrations to improve coordination in dealing with energy transition policies. It is expected that the project will develop the necessary methodologies to support pilot regions and, particularly, small municipalities in better planning and implementing CET policies.

02

Solutions

The Plan4CET project will develop various methodologies and governance models to facilitate interaction among different public administrations and their departments. Three pilot tests will be implemented in different regions: Navarre (Spain), Skåne (Sweden), and Emilia Romagna (Italy). The goal is to assist these regions in improving their plans, strategies, and internal competence organization to address and work on energy transition effectively. Furthermore, the project will develop different capacity building trainings for public officers, policy makers and technicians to boost their capacities do develop CET plans and policies.

03

Impacts

The Plan4CET project will have a significant impact on the participating regions. It is expected to train over 450 policymakers across the 3 pilot regions to enhance their capabilities and knowledge around clean energy transition. This knowledge infusion is expected to catalyze a substantial €218 million investment in Clean Energy Transition (CET) initiatives for new Renewable energy and other sustainable policies. Besides, the project will establish more than 50 sustainable Energy and Climate Action Plans (SECAPs) and support more than 230 municipalities from the project pilot regions to implement clean energy transition policies.
