

terraXcube is searching for **volunteers** to participate in a **cognitive psychology experiment**

## **Do you think you can feel hot and cold equally well?** **Test yourself by participating in a new experiment** **inside the terraXcube!**

Participate in our experiment and discover how sensitive you are in perceiving changes in the environmental temperature.

The experiment is carried out in Bolzano-Bozen, inside the climate chambers of terraXcube. In particular, you will participate in two experimental sessions of two hours each. You will be asked to move between the climate chambers and report each time if you believe that the temperature inside has changed. In particular, the temperature will change between 6 and 40 °C.

**If interested, please contact:**

**[margherita.bisaglia@studenti.unitn.it](mailto:margherita.bisaglia@studenti.unitn.it)**

Moreover, you will have to compile online some questionnaires to verify your suitability to participate.

### CRITERIA FOR PARTICIPATION IN DETAIL:

- Being between 18 and 65 years old
- Have a body mass index within normal range (>18.5 and <24.9)
