

terraXcube is searching for **volunteers** to participate in a **cognitive psychology experiment**

Do you think temperature affects your behaviour? **Come and find out by participating in a new** **experiment inside the terraXcube!**

Participate in our study and find out if your perception of the space around you is influenced by the temperature present in that environment.

The study takes place in Bolzano, inside the terraXcube climate chambers. In particular, you will participate in one experimental session lasting two hours. You will be asked to wear a Virtual Reality headset and move between the climate chambers at different temperatures (range between 8 °C and 38 °C). Inside the virtual reality you will see both inanimate objects and human avatars and your task will be to approach them by following different instructions each time.

At the end of the experiment you will receive a tXc winter hat!

If interested write to:

laura.battistel@eurac.edu

Moreover, we will give you some questionnaires to compile online to verify your suitability to participate.

CRITERIA FOR PARTICIPATION IN DETAIL:

- Being between 18 and 65 years old
- Have a body mass index within normal range (>18.5 and <24.9)
- Do not suffer from or have a history of neurological and/or psychiatric disorders
- Do not suffer or have a history of heart disease
- Have normal or correct-to-normal vision
