

Online lecture series — Third edition

## The World in 2050

Perspectives on Anticipation, Innovation, Finance and Education

29 January - 18 June 2025

## A Global UNESCO Chairs lecture series organized by the UNESCO Chair in Interdisciplinary Anticipation and Global-Local Transformation, Center for Advanced Studies, Eurac Research

In a rapidly evolving world, preparing for the future demands innovative thinking and collaborative action. The third edition of the UNESCO Chair Lecture Series explores the critical challenges and transformative opportunities shaping our social, economic, political, and ecological systems. Through an interdisciplinary lens, the series brings together leading experts to address key issues such as anticipation, innovation, finance and education, while fostering a deeper understanding of how global and local transformations can shape a more equitable and resilient future.

One of the major players in looking ahead is the United Nation's Educational, Scientific and Cultural Organization, UNESCO. Based on its 2022-29 strategy to accomplish the goals of the UN Decade 2030, UNESCO proposes innovative approaches to re-imagining inter- and trans-disciplinary views on what the future might hold. The global lecture series "The World in 2050" connects UNESCO Chairs from different disciplines and continents to provide a comprehensive joint vision of possible futures.

Opening remarks Roland Benedikter, UNESCO Chair in Interdisciplinary Anticipation & Global-Local Transformation, Eurac Research Bolzano/Bozen, Italy  How Can Futures Literacy and Anticipation Help Us Navigate an Uncertain Future?
